A:Title: The human OX40 homolog: cDNA structure, expression and chromosomal assignmen
A; Reference number: 137552; MUID:94170844
A; Accession: 137552
A; Status: preliminary; translated from GB/EMBL/DDBJ
A; Molecule type: mRNA
A; Residues: 1-277 < CRES>
A; Cross-references: EMBL:X75962; NID:g472957; PIDN:CAA53576.1; PID:g472958
C; Superfamily: CD27 antigen; NGF receptor repeat homology
                                                              RESULT
S12783
\ensuremath{\mathsf{OX40}} antigen precursor - rat \ensuremath{\mathsf{N;Alternate}} names: nerve growth factor receptor homolog
                                                                                                                                                                                                                                                                                                                                δõ
                                                                                                                                                                                                                                                                                                                                                                                            В
                                                                                                                                                                                                                                                                                                                                                                                                                                       δÃ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      밁

RA MOTINGS T., Higashio K.;

RY "RANK is the essential signaling receptor for osteoclast differentiation factor in osteoclastogenesis.";

RI Biochem. Biophys. Res. Commun. 253:395-400(1998).

C -!- FUNCTION: RECEPTOR FOR RANK LIGAND (RANKL; ALSO KNOWN AS OSTEOCLAST DIFFERENTIATION FACTOR OR ODF), ESSENTIAL FOR RANKL-CC MEDIATED OSTEOCLASTOGENESIS. INVOLVED IN THE REGULATION OF INTERACTIONS BETWEEN T-CELLS AND DENDRITIC CELLS.

C -!- SUBCELLULAR LOCATION: Type I membrane protein (Potential).

C -!- TISSUE SPECIFICITY: UBIQUITOUS EXPRESSION WITH HIGH LEVELS IN TRABECULAR BONE, THYMUS, SMALL INTESTINE, LUNG, BRAIN AND KIDNEY.

C -!- SIMILARITY: CONTAINS 4 THER-CYS REPEATS.
                                                                                                                             Query Match

"Leukocystatin, a new class II cystatin expressed selectively by
hematopoietic cells.";
J. Biol. Chem. 273:16400-16408(1998).
J. Biol. Chem. 273:16400-16408 (1998).
J. FUNCTION: INIBITS PAPAIN AND CATHEPSIN L BUT WITH AFFINITIES
LOWER THAN OTHER CYSTATINS. MAY PLAY A ROLE IN IMMUNE REGULATION
THROUGH INHIBITION OF A UNIQUE TARGET IN THE HEMATOPOIETIC SYSTEM.
-!- SUBCELLULAR LOCATION: Secreted (Probable).
-!- SIMILARITY: BELLONGS TO THE CYSTATIN FAMILY.
                                                                                                                                                                   DISULFID
